

## System Center Configuration Manager

**BDS Solutions' has been helping health and care organisations harness the power of System Center Configuration Manager since its inception.**

*System Center Configuration Manager (SCCM)* is a Microsoft systems management product, designed to help manage large groups of computers running a range of operating systems. SCCM enables user experiences across a wide range of devices, while also ensuring that you meet corporate control and compliance requirements.

The latest version of SCCM allows organisations to empower users to be productive, providing access to the applications they need from any device at any time, securely and efficiently.

BDS can support NHS organisations with the following:

- **Requirements Analysis** - We work closely with IT teams to analyse the current systems in order to determine your specific system requirements.
- **Business Case Development** - Our team understand that you need to prove the need for new technology and will work alongside you to provide a detailed business case.
- **Technical Design** - Providing a bespoke service that meets your organisations needs, we will Design a system that compliments the existing infrastructure.
- **Deployment** - From design, planning, coordination and delivery, our specialist team will work with you from start to finish.

# System Center Configuration Manager

## Empower User Productivity

System Center Configuration Manager (SCCM) provides users with the services they need to be productive from anywhere, on whatever device they choose.

SCCM:

- Manages a wide range of mobile devices, with single administrative console for policies, asset management, and compliance reporting.
- Provides users with optimised application delivery to each of their devices based on device type and network capabilities.
- Allows users to securely self-provision applications with an easy-to-use web catalogue.

## Unify the IT Management Infrastructure

SCCM helps users to streamline operations with a unified infrastructure that integrates client management and protection across mobile, physical and virtual environments.

SCCM:

- Provides a single tool to manage all your client desktops, thin clients, mobile devices and virtual desktops.
- Consolidates anti-malware protection, vulnerability prevention and remediation, and compliance reporting in a single infrastructure.
- Reduces infrastructure costs through server role consolidation and scalability enhancements.

## Simplify Administration

SCCM makes it easier and faster to administer client systems and offers improved visibility and enforcement options for maintaining system compliance.

SCCM:

- Delivers world-class inventory, operating systems deployment, update management, assessment and settings enforcement, with exceptional support for Windows.
- Makes day-to-day tasks easier by organising administrative tasks by role and making it possible for administrators to define an application on time for delivery across multiple devices.
- Provides continuous settings enforcement to automatically identify and remediate non-compliant machines.

Tailored IT services from BDS include:

IT Service Desk  
Active Directory

Identity  
Management

Technical  
Consultancy

Datacentre

End User  
Computing

Security

Deployments  
and Migration

Messaging  
Collaboration

### Client Testimonial:

*"The solution and processes delivered by BDS Solutions was key to accelerating the upgrade of our legacy Windows XP desktop estate to Windows 7."*

*Jimmy Parker  
Development Office Lead  
Southport and Ormskirk  
NHS Trust*
